PROJECT DESCRIPTION:

The purpose of this project is to teach the importance and basic concepts of recycling to help our environment.

POSTER REQUIREMENTS:

See poster requirements and guidelines.

EXHIBIT:

LEVEL A: GRADES 3 - 5

Recycle an article by making it into something else you can use. This can be clothing items, furniture items, bottles or cans, or any other items.

LEVEL B: GRADES 6 - 8

Prepare a poster or display (no larger than 2' x 3') showing something you learned from your completed activities or experiments (include your results). You may show the actual experiment.

LEVEL C: GRADES 9 - 12

1. Expand on one of the activities or experiments in your manual. Prepare a poster or display (no larger than 2' x 3') showing something you have learned. Be sure to include your results, notebook, and an explanation of how you changed or expanded the experiment.
2. Plan and begin (or continue) a recycling program in your home or neighborhood. Prepare a poster or display (no larger than 2' x 3') showing your plan, one or more of the benefits of your recycling efforts (money saved or recouped, resources saved in terms of pounds of materials, number of trees, manufacturing dollars, etc.)
3. Design your own activity or experiment and exhibit about it. Size limitations are the same as for the other exhibits. Difficulty level should be about the same as the other options in this level. Be sure to include a notebook outlining your plans and including your results.
4. Look at your project manual for a complete list of all project requirements.
