TREATING

YOUR CAT

WITH CARE

AND

RESPECT

Treating your cat with care

A good way to treat your cat with care is by cleaning your cats litter box. No cat likes a dirty litter box. Your cat has to step over poop to go poop! Gross, you know your cat deserves better. A good time to clean the litter box is at night before you go to bed. That way in the morning your cat has a clean litter box unless they use it during the night. Now your cat will have fresh litter! You cat is grateful, too let you know.

Cats like fresh food. If your cat doesn't touch it's food, don't worry about it because it's probably because there is something in their food that they don't like. Or because the food is dry and they have lost interest in it. Another great way to treat your cat with care is by feeding your cat a certain way. That certain way is by the next time you go to give your cat food, if you put it in a dispenser don't fill it up all the way so that hopefully the next day most of the food is gone and you can put fresh food in. The same goes for the water. Wash the bowl or dispenser and put fresh water in each morning so your cat will have fresh water.

Also of course give your cat your love and the attention it needs. Do this and you will give your cat the purr-fect life.

Cece

Treating your cat with Respect

Treat your cat with respect. They have feelings just like you and me. A great way to treat your cat with respect, is by not bothering your cat when they sleep. Cats need their sleep just like we do. Cats will sleep 2-5 hours straight in a day. Plus take little naps throughout the day. Since cats also need sleep just like us, it is better to not bother them at that time. Even when they are cuddled up and look so adorable, push yourself to not bother them. Another way to treat your cat with respect is to acknowledge them. It's mean to ignore them when they want to show you that they love you and or when they are seeking love and affection. Remember that.
